## ***About Me***

I am an interdisciplinary and eager-to-learn student with a Bachelor of Arts in Law from the University of Portsmouth and an ongoing bachelor's degree in finance at BI Norwegian Business School. Throughout my studies at BI, I have chosen to specialize in technology and data-driven analysis through electives such as machine learning, programming, and fintech.

During my education, I have applied Python: both through electives and the Harvard CS50 course, R through core and elective courses as well as certificate training, Power BI through the Microsoft PL-300 course and finally, SQL through Coursera training. I have also participated in technology-related events through volunteer work.

I am seeking opportunities within data-driven finance, analytics, or fintech after completing my degree in June 2026.

---
